

1. On the computer with the drive you wish to share, go to File Explorer.
2. Right-click on the drive from the sidebar, then hover over "Give access to" in the menu. From there, select "Advanced sharing".
3. Select the "Advanced Sharing" button in the next window.
4. Make sure "Share this folder" is checked. Type in a share name for the drive that can be recognized.
5. Then, select "Permissions".
6. Check the box granting "Full Control". Press "OK" to confirm.
7. On the computer you are sharing the drive with, go to File Explorer.
8. Select "Network" on the sidebar.
9. In the search bar for the file location, type in two backslashes and the device name of the sharing computer. Then, hit "Enter".
10. Double-click the folder with the drive name that you wish to share (in this case we are using the C Drive) to make sure all the files have successfully transferred and to make sure it is the correct Drive
